Day 29 Deliverable: Mentor Live Demo Practice Checklist & Video Script

Project: FinDoc-AuditEngine v3.0
Target Demo Duration: 10–15 Minutes
Verification Status: 25/25 Automated Tests Passing | Localhost Server Active (http://127.0.0.1:8000)

1. Pre-Demo Environment Readiness Checklist (T-Minus 10 Minutes)

- [x] 1. Verify Python & Dependencies: Python 3.14.3 environment active with fastapi, uvicorn, scikit-learn, pydantic, pytest.
- [x] 2. Run Pre-Flight PyTest Suite:

```
cd C:\projects\linkific\internship\Day-29
python -m pytest tests -v
```

Confirm output reads 25 passed in < 2.0s.

- [x] 3. Launch Localhost Server via Application-Control Safe Runner:

```
python run_server.py
```

Confirm Uvicorn is listening on http://127.0.0.1:8000.

- [x] 4. Open Browser Tabs in Advance:
- Tab 1: Institutional Audit Workbench – http://127.0.0.1:8000/dashboard
- Tab 2: Swagger OpenAPI Specification – http://127.0.0.1:8000/docs
- Tab 3: System Health & Model Telemetry – http://127.0.0.1:8000/health
- [x] 5. Terminal Window Arrangement: Keep PowerShell open alongside the browser so mentors can see live server logs (Privacy Gate, Reconciliation, ML Scorer, Governance Router) stream on every click.

2. Five-Act Live Mentor Demo Script (Step-by-Step)

Act 1: System Telemetry & Institutional UI Tour (1.5 Minutes)

1. Show http://127.0.0.1:8000/health to confirm IsolationForest_v2.0, Perturbation_Marginal_XAI_7D, and pegged_usd_to_inr: 86.5.
2. Switch to http://127.0.0.1:8000/dashboard. Point out the clean institutional light grid, IBM Plex Mono tabular numerals, and the 5-column KPI strip at the top.

Act 2: One-Click 5-Scenario Enterprise Batch Execution (2 Minutes)

1. Click "Run 5-Scenario Batch" in the top-right command bar.
2. Point out how the KPI strip immediately updates:
- Total Invoices Audited: 5
- Disbursed Capital (USD): $32,292.00
- Disbursed Capital (INR): INR 2,793,258.00
- Straight-Through Rate (STP): 20.0%
- Held / Blocked Exceptions: 2
3. Use the Filter Tabs (Tier 1 STP, Tier 2 Manager, Tier 3 Director, Rejected, Frozen Fraud) in the bottom ledger and click "Inspect" on INV-1005 to show the slide-over cryptographic JSON Audit Dossier.

Act 3: Proving 100% Dynamic Execution on Arbitrary Custom Inputs (3 Minutes)

1. Click "New Blank" or "Synthesize Random Invoice" in Panel 1.
2. Add a second line item using + Add Line Item:
- Row 1: SKU-SRV, Dell PowerEdge Server, Inv Rate $4,200, PO Rate $4,000 (+$200 overcharge), Qty 2, GRN Recv 2, GRN Rej 0.
- Row 2: SKU-NIC, 100GbE Fiber Transceiver, Inv Rate $300, PO Rate $300, Qty 5, GRN Recv 5, GRN Rej 2 (2 damaged at dock).
3. Point out the Live Pre-Audit Calculation Strip updating as you type:
- Projected Rate Variance and Projected Dock Shortage turn crimson before submission.
4. Click "Execute 3-Way Reconciliation & Isolation Forest Audit".
5. In Panel 2, show the Per-Item Reconciliation Verification Table (flagging RATE_VARIANCE on Row 1 and QTY_SHORTAGE on Row 2) and the Perturbation Feature Attribution Bars dynamically calculated for your custom input.

Act 4: Unstructured Free-Text Parsing & PII Redaction (1.5 Minutes)

1. Click "Paste Raw Text / PII" in Panel 1.
2. Paste:
Invoice INV-7742 from Horizon Cybernetics Pvt Ltd; PO: PO-7742; Total: $890.00; Country: IN; Contact: priya.billing@horizon.in; Tax PAN: ABCDE1234F; Account: 987654321099
3. Click "Extract Fields & Scrub PII". Show the green confirmation banner proving that 3 PII tokens (EMAIL, PAN, ACCOUNT) were masked and the form fields were populated automatically.
4. Click "Execute 3-Way Reconciliation & Isolation Forest Audit" to watch it route to TIER_1_STP_AUTO_APPROVED.

Act 5: Compliance CSV Export & CLI Mentor Demo Runner (2 Minutes)

1. Click "Export CSV" in the top command bar to download FinDoc_Audit_Compliance_Ledger.csv.
2. Switch to the terminal and run the automated CLI mentor script:
python run_mentor_demo.py
Show the 5-stage formatted terminal walkthrough and 25/25 test verification.
