Updated LinkedIn Profile Optimization & Copy-Paste Guide

Target Profile:
https://www.linkedin.com/in/shri-sanjaykumar-v-588bab28a/
Candidate: Shri Sanjaykumar V (M.Tech Integrated in Software Engineering @ VIT Vellore | CGPA 9.12)

1. Optimized LinkedIn Headline Options (220-Character Limit)

Option A – Recommended (Balanced SWE + AI/ML + Credibility)

AI/ML & Software Engineering Intern @ Linkific | Ex-GenAI Intern @ TForce India | M.Tech Integrated SWE @ VIT Vellore (9.12 CGPA) | FastAPI, RAG, Explainable ML & Distributed Systems | Oracle Certified

Option B – FinTech / Enterprise AI Focus (Ideal for Visa, Stripe, JPMorgan, Enterprise SaaS)

Software & AI Engineer | Built FinDoc-AuditEngine v3.0 (FastAPI, 3-Way Match, Isolation Forest XAI) @ Linkific | Ex-GenAI Intern @ TForce (SAP BTP) | M.Tech SWE @ VIT (9.12 CGPA)

Option C – Concise Recruiter-Search Optimized

SDE & AI/ML Intern @ Linkific | Ex-TForce India (GenAI/RAG) | M.Tech SWE @ VIT Vellore (9.12 CGPA) | Python • FastAPI • Java • Microservices • RAG • scikit-learn • AWS/Azure

2. Updated "About" Section (Copy-Paste Ready)

I am an M.Tech Integrated Software Engineering student at Vellore Institute of Technology (CGPA: 9.12/10.0) passionate about building high-reliability backend microservices, enterprise Generative AI systems, and explainable machine learning pipelines that solve real-world financial and security problems.

Across my internships at Linkific (AI/ML Software Engineering Intern) and TForce India Private Limited (Software Engineering Intern – Generative AI), I have focused on bridging deterministic software engineering with production AI:

• Enterprise Financial AI & Explainable ML (Linkific): Architected FinDoc-AuditEngine v3.0, an institutional Accounts Payable auditing gateway combining SKU-level 3-Way Reconciliation (Invoice–PO–GRN), a pre-inference Responsible AI PII Scrubber (PAN, Aadhaar, Bank Account, Email), and a 7-dimensional Isolation Forest risk model with real-time Single-Feature Perturbation Explainability (XAI) in FastAPI (<15ms latency, 30/30 automated PyTests).

• Enterprise RAG & Cloud Microservices (TForce India): Engineered context-grounded Retrieval-Augmented Generation (RAG) workflows using Python, SAP BTP, and the SAP Generative AI Hub SDK, integrating AI inference into modular RESTful backend services.

• Full-Stack & Security Engineering: Built LEGITIFY (automated DevSecOps repository compliance analyzer), CampusLLM (source-cited university RAG assistant with ~3s latency), FinTrack (multi-party graph debt-settlement platform), and a 5-model Solar Energy Forecasting benchmark (XGBoost, LSTM, Random Forest).

• Procurement & Organizational Leadership: Served as Purchase Manager for VIT's Riviera & Gravitas festivals (securing INR 60+ Lakhs in sponsorships and managing end-to-end procurement workflows) and Vice Chairperson of the VIT Health Club (leading "Hack the Hospital" for 600+ participants).

Core Stack:
• Languages: Python, Java, C++, C, TypeScript, JavaScript, SQL
• Backend & Cloud: FastAPI, REST Microservices, Pydantic v2, PyTest, Docker, GitHub Actions CI/CD, AWS (EC2), Azure (VMs, NSG), Linux
• AI & ML: RAG, Vector Search, Agentic AI, scikit-learn, Isolation Forest, Perturbation XAI, XGBoost, LSTM, OpenAI API, SAP Generative AI Hub SDK

Open to Software Engineering (SDE), AI/ML Engineering, and FinTech Systems Engineering opportunities. Reach me at v.shrisanjaykumar@gmail.com.

3. Experience Section – New Entry to Add (Linkific)

- Title: AI/ML Software Engineering Intern
- Employment Type: Internship
- Company: Linkific
- Location: Remote / India
- Duration: Aug 2026 – Oct 2026
- Description (Copy-Paste Ready):

• Architected FinDoc-AuditEngine v3.0, an enterprise Accounts Payable auditing microservice combining deterministic 3-Way Reconciliation (Invoice vs. Purchase Order vs. Goods Receipt Note) with a 7-dimensional StandardScaler + 200-tree Isolation Forest anomaly detector in FastAPI.

• Implemented real-time Single-Feature Perturbation Explainability (XAI) to attribute risk scores (+pts) across 7 financial dimensions (unit rate markup, GRN dock shortage, tax deviation, line concentration, offshore jurisdiction, and payment urgency) in <15ms end-to-end latency.
• Engineered a pre-inference Responsible AI Privacy Shield masking 6 PII categories (Indian PAN, Aadhaar, Bank Accounts, Credit Cards, Phones, Emails) and built an Institutional Editorial Light UI supporting dual-currency (USD / INR @ 86.50) live auditing and CSV compliance exports.
• Delivered 30 progressive AI/ML engineering modules backed by a 30/30 automated PyTest suite, Pydantic v2 cross-field validators, correlation-ID telemetry middleware, and GitHub Actions CI/CD pipelines.

- Skills to Tag on This Experience: FastAPI, Python (Programming Language), Machine Learning, Explainable AI (XAI), Anomaly Detection, Pydantic, PyTest, REST APIs, Microservices, Financial Technology (FinTech)

4. Featured Section & Projects Section Additions

Featured Item 1 – Capstone Repository

- Title: FinDoc-AuditEngine v3.0 – Enterprise 3-Way AP Reconciliation & 7-D Explainable ML Gateway
- Link: https://github.com/Shri-Sanjaykumar/Linkific-Tasks/tree/main/Day-30
- Summary: Production FastAPI microservice & Institutional Editorial Light Workbench combining 3-Way Matching, Pre-Inference PII Scrubbing, 7-D Isolation Forest Anomaly Detection, and Perturbation XAI (30/30 PyTests Passing).

Featured Item 2 – 30-Day AI/ML Engineering Portfolio

- Title: AI-ML-Internship – 30-Day Production AI, RAG, NLP & MLOps Engineering Repository
- Link: https://github.com/Shri-Sanjaykumar/AI-ML-Internship

5. Ready-to-Publish LinkedIn Capstone Completion Post

Wrapping up my 30-Day AI/ML Software Engineering Internship at Linkific!

Over the past month, I focused on a question that came straight out of my experience managing procurement and sponsorships for VIT's Riviera & Gravitas festivals: How do enterprise finance teams catch subtle invoice overcharges, dock shortages, and offshore shell-company anomalies at scale without black-box AI guesses?

For my capstone project, I architected and shipped FinDoc-AuditEngine v3.0 – an Enterprise Financial Document Reconciliation & Explainable ML Risk Gateway:

1. Pre-Inference Responsible AI Privacy Gate: Deterministically scrubs PAN, Aadhaar, bank account, phone, and email PII tokens before any ML inference or ledger storage.
2. Deterministic 3-Way Line-Item Matcher: Reconciles Invoice vs. Purchase Order vs. Goods Receipt Note (GRN) SKUs in USD ($) and INR (INR @ 86.50) with strict Pydantic v2 cross-field invariants.
3. 7-Dimensional Isolation Forest + Perturbation XAI: Scores multivariate statistical anomalies across 200 isolation trees and computes real-time Single-Feature Perturbation Attribution (+pts per feature) so human auditors see the exact mathematical driver behind every flagged invoice.
4. Institutional Editorial Workbench & 30/30 PyTest Suite: Sub-15ms end-to-end latency, live editable line-item DOM matrix, unstructured OCR text parser, and 5-tier corporate governance routing.

Full Source Code & 30-Day Portfolio:
• Primary Repo: https://github.com/Shri-Sanjaykumar/Linkific-Tasks
• Python AI/ML Mirror: https://github.com/Shri-Sanjaykumar/AI-ML-Internship

Grateful to my mentors and team at Linkific for the rigorous code reviews, architectural feedback, and emphasis on production testing!
